1 Introduction

1.1 Description of project

In just a few seconds, this system will enable a customer to book an appointment at Nails&Makeup. The salon offers different services such as manicures, pedicures, and make-up. The services will be allocated on different days, for instance, manicures will be done only on Mondays, Thursdays, and Saturdays, pedicures on Wednesdays and Sundays, and make-up on Tuesdays and Fridays. The list of days and services will be available on a service option. A list of options will be available for each category and the customer will have to choose one or more depending on their liking. After selection, the system will prompt the user to confirm the booking. After confirmation, an email will be sent to the customer marking the confirmation of the booking.

The project has the following functionalities:

- Menu Screen
- Log in, Sign Up or Exit
- Choose Service
- Choose day
- Booking
- Exit system

1.2 System requirements

Performance:

- 1) The system should provide a response in about 5 to 10 seconds.
- 2) The system shall be able to load in 1 to 2 seconds of opening or clicking on something.

Usability:

- 1) The system shall be user friendly so that users feel comfortable using it.
- 2) The system shall be responsive enough to accommodate 20 users at a time.

Security:

- 1) The user should get an error message if their username or password is invalid.
- 2) The system shall be able to check who has access to the system by demanding a password for security purposes as well as a specification of not less than 7 characters.
- 3) The system shall be able to secure any transaction involved between the customer and the company

Availability:

- 1) The system shall be available 24 hours a day, 7 days a week.
- 2) The system shall be able to work in less than 24 hours if the system crashes.

Ethical:

- 1) The system shall act ethically by helping the user but not make any choice for the user.

1.2.1 Functional requirements

FR1: The system shall prompt the user to enter her first name.

FR2: The system shall prompt the user to enter her last name.

FR3: The system shall prompt the user to enter her age.

FR4: The system shall prompt the user to enter her email address.

FR5: The system shall prompt the user to enter her user name.

FR6: The system shall prompt the user to enter her password.

FR7: The system shall prompt the user to enter choice.

FR8: The system shall prompt the user to enter day.

FR9: The system shall display error messages when appropriate.

1.2.2 Non – Functional requirements

NFR1: The system shall accept first names with length between 3 to 30 characters and contains only [a-z] and [A-Z].

NFR2: The system shall accept last names with length between 3 to 30 characters and contains only [a-z] and [A-Z].

NFR3: The system shall accept ages greater than 18.

NFR4: The system shall accept email address that contain “@” and “.”.

NFR5: The system shall accept user names with length 9 to 20 characters and starts with an uppercase letter.

NFR6: The system shall accept passwords with length 8 – 14 characters and containing one of #, _, &.

NFR7: The system shall accept only 1, 2 or 3 for choice.

NFR8: The system shall accept Monday, Tuesday, Wednesday, Thursday, Friday, Saturday and Sunday for day.

NFR9: The system shall be written using the Java programming language.

NFR10: The system should be portable, meaning it can be implemented on various operating systems.

NFR11: The system shall allow access to multiple users simultaneously.

NFR12: The system shall have an interface that is user friendly.

NFR13: The system shall respond within 2 to 3 seconds.

NFR14: The system shall be operational 24 hours, 7 days.

1.3 Modules

There are 3 types of modules in this phase namely:

- User Module
- System Module
- Administrator Module

The functionality for each module is provided below:

User Module

The user should be able to login in the application to make her appointment for the service being provided such as pedicure, manicure and facial.

Booking should be confirmed for a particular date according to the user.

System Module

The selection to book for a particular appointment should be done by the user according to their needs. The booking should display immediately after the client has already selected what she wants to do.

Administration Module

The administrator should be able to change the different time and date in case of emergency. The administrator should inform when there is discount on the price of the service provided especially during festive mood.

1.4 Test cases

1. 4 Branch coverage

1.4.1 Branch coverage for First name

```
package nails_and_makeup;
import java.util.Scanner;

public class SignUp {

    Scanner in = new Scanner (System.in);
    public void signup ()
    {
        String fname = new String();
        String lname = new String();
        String email = new String();
        String password = new String();
        int age;
        //Prompt for first name
        System.out.println("Enter your Firstname");
        //Input first name
        fname=in.nextLine();
```

Branch 1

```
        while ( !(isAlphabet(fname))) // is used to check if the characters
in the first name are valid and are all letters
        {
            System.out.println("Invalid Characters! Use a-z or A-Z for
firstname");//Display error message
            // Continuous prompt for valid characters
            System.out.println("Enter your Firstname");
            //input first name
            fname=in.nextLine();
```

```
        }

        // if the characters are all alphabets then check the first name range
if it is between 3-30
```

Branch 2

```
while (fname.length() < 3 || fname.length() > 30)
{
    //if it is not in accepted range,
    System.out.println("Firstname should be between 3-30 characters");//
    an error message is displayed
    // Continuous prompt using the while loop
    System.out.println("Enter your Firstname");

    //input first name within the range for the loop to break
    fname=in.nextLine();
}
```

Correct format of First name:

- Should contain only [a-z] and [A-Z]
- Length between 3-30

Test Data for First Name:

Test case ID	Test data	Branch 1	Branch 2	Output
1	Ke	True	False	Invalid
2	Keiva	True	True	Valid

1.4.2 Branch coverage for Last name

```
//Prompt for Last name input
System.out.println("Enter your Lastname");
//Input last name
lname= in.nextLine();
```

Branch 1

```
while (!isAlphabet(lname))// is used to check if the characters in the
last name are valid and are all letters
{
    System.out.println("Invalid Characters! Use a-z or A-Z for
lastname");//Display error message
    // Continuous prompt for valid characters
    System.out.println("Enter your Lastname");
    //input last name
    lname= in.nextLine();
}
```

```
// if the characters are all alphabets then check the last name range if it
is between 3-30
```

Branch 2

```
while (lname.length()<3||lname.length()>30)
//if it is not in accepted range,
System.out.println("Lastname should be between 3-30 characters");//
an error message is displayed
// Continuous prompt using the while loop
System.out.println("Enter your Lastname");
//input last name within the range for the loop to break
lname= in.nextLine();
}
```

Correct format of Last name:

- Should contain only [a-z] and [A-Z]
- Length between 3-30

Test Data for Last name:

Test case ID	Test data	Branch 1	Branch 2	Output
1	Ch5	False	True	Invalid
2	Charlotte	True	True	Valid

1.4.3 Branch coverage for age

```
// Prompt to enter age
System.out.println("Enter your age");
//Input age
age = in.nextInt();
```

Branch 1

```
while (age <17|| age > 100) // check if age < 17
{
    // if yes
    // System.out.println("Age should be greater than 17 years old!
"); // Display Error Message
    //Continuous Prompt for an age > 17
    System.out.println("Enter age that is 18 years old or above");
    // Input age
    age = in.nextInt();
```

Correct format of Age

- Age should be 18 or greater
- Numeric

Test Data for Age:

Test case ID	Test data	Branch 1	Output
1	10	False	Invalid
2	25	True	Valid

1.4.4 Branch coverage for Email address

```
System.out.println("Enter your Email Address");  
email=in.next();
```

Branch 1

```
while (!email.contains(".") || !email.contains("@")) //loop to check if the  
mail contains '.' and '@'  
    // if not then it goes into the loop  
    {  
        System.out.println("Invalid Email");//Display error message  
        //Continuous Prompt for valid mail  
        System.out.println("Enter a Valid Email Address");  
        //input valid mail  
        email=in.next();  
    }
```

Correct format of Email address

- Alphanumeric followed by a character “@” follow by alphabets followed by a dot “.”
- Followed by a valid domain

Test Data for Email address:

Test case ID	Test data	Branch 1	Output
1	keivagmailcom	False	Invalid
2	keiva@gmailcom	False	Invalid
3	Keivagmail.com	False	Invalid
4	keiva@gmail.com	True	Valid

1.4.5 Branch coverage for User name

```
System.out.println("Enter Username");
    username = in.nextLine();
    //System.out.println("Successful");
    // check the user name length and continue to prompt if it is outside
the accepted range
```

Branch 1

```
while (!isUpper(username)) // is used to check if the characters in the
username are valid and are all letters
{
    System.out.println("First Character should be of UPPERCASE");//Display
error message
    // Continuous prompt for valid characters
    System.out.println("Enter a valid username");
    //input username
    username= in.next();
}
```

Branch 2

```
while (username.length() <9 || username.length()>20)
{
    System.out.println("Username should be between 9 to 20 characters");
    System.out.println("Enter your username");
    username = in.nextLine();
}
```

Correct format of User name:

- First alphabet in uppercase Branch 1
- Length should be between 9 to 20 branch 2

Test Data for User name:

Test case ID	Test data	Branch 1	Branch 2	Output
1	keiva	False	False	Invalid
2	Keivaaaaaaaa	True	True	Valid
3	Keivaaaaaaaaaaaaaaaaaaaaa	True	False	Invalid
4	keivaaaaaaaa	False	True	Invalid

1.4.6 Branch coverage for password

```
System.out.println("Enter Password");  
password = in.nextLine();
```

Branch 1

```
while (password.length() <8 || password.length()>14)  
{  
    System.out.println("Password should be between 8 to 14 characters");  
    System.out.println("Enter a valid password");  
    password = in.nextLine();  
}
```

Branch 2

```
while (!isUppertotal(password))  
{  
    System.out.println("Password should contain at least 1 UPPERCASE");  
    System.out.println("Enter a valid password");  
    password = in.nextLine();  
}
```

Branch 3

```
while (!isspecial(password))  
{  
    System.out.println("Password should contain at least 1 special  
character('#','_', '&')");  
    System.out.println("Enter a valid password");  
    password = in.nextLine();  
}
```

Correct format of password:

- Length should be 8 to 14.
- Must contain at least one uppercase letter
- Alphabetical, must contain a special character (#, _, &)

Test data for password:

Test case ID	Test data	Branch 1	Branch 2	Branch 3	Output
1	charlotte	True	False	False	Invalid
2	Char	False	True	False	Invalid

3	Char#	False	True	True	Invalid
4	chArlooooooooootte_	False	True	True	Invalid
5	KeivaCharlot&	True	True	True	Valid

1.5 Condition coverage

1.5.1 Condition coverage for first name

```
//Prompt for first name
System.out.println("Enter your Firstname");
//Input first name
fname=in.nextLine();

    Condition 1
while ( !(isAlphabet(fname)))// is used to check if the characters in the
first name are valid and are all letters
{
    System.out.println("Invalid Characters! Use a-z or A-Z for
firstname");//Display error message
    // Continuous prompt for valid characters
    System.out.println("Enter your Firstname");
    //input first name
    fname=in.nextLine();

    // if the characters are all alphabets then check the first name range
if it is between 3-30

    Condition 2    Condition 3
while (fname.length()<3||fname.length()>30)
{
    //if it is not in accepted range,
    System.out.println("Firstname should be between 3-30 characters");//
an error message is displayed
    // Continuous prompt using the while loop
    System.out.println("Enter your Firstname");
    //input first name within the range for the loop to break
    fname=in.nextLine();
    }    fname=in.nextLine();
}
```

Test Data for First Name:

Test case ID	Test data	Condition 1	Condition 2	Condition 3
1	Ki	True	True	False
2	Ke1vaaaaaaaaaaaaaaaaaaaaaaaaaa	False	False	True

1.5.2 Condition coverage for last name

```
//Prompt for Last name input
System.out.println("Enter your Lastname");
//Input last name
lname= in.nextLine();

Condition 1

while (!(isAlphabet(lname)))// is used to check if the characters in
the last name are valid and are all letters
{
    System.out.println ("Invalid Characters! Use a-z or A-Z for
lastname");//Display error message
    // Continuous prompt for valid characters
    System.out.println("Enter your Lastname");
    //input last name
    lname= in.nextLine();
}

// if the characters are all alphabets then check the last name range if it
is between 3-30

Condition 2          Condition 3
while (lname.length()<3||lname.length()>30)
{
    //if it is not in accepted range,
    System.out.println("Lastname should be between 3-30 characters");// an
error message is displayed
    // Continuous prompt using the while loop
    System.out.println("Enter your Lastname");
    //input last name within the range for the loop to break
    lname= in.nextLine();
}
```

Test Data for Last Name:

Test case ID	Test data	Condition 1	Condition 2	Condition 3
1	Ch	True	True	False
2	chAr1oooooooootteeeeeeeeeeeeeee	False	False	True

1.5.3 Condition coverage for age

```
// Prompt to enter age
System.out.println("Enter your age");
//Input age
age = in.nextInt();

    Condition 1  Condition 2
while (age <17|| age > 100) // check if age < 17
{
    // if yes
    // System.out.println("Age should be greater than 17 years old! ");//
Display Error Message
//Continuous Prompt for an age > 17
System.out.println("Enter age that is 18 years old or above");
// Input age
age = in.nextInt();
```

Test Data for Age:

Test case ID	Test data	Condition 1	Condition 2
1	17	False	False
2	110	false	True

1.5.4 Condition coverage of email address

```
System.out.println("Enter your Email Address");
email=in.next();

                Condition 1                Condition 2
while (!email.contains(".") || !email.contains("@"))//loop to check if
the mail contains '.' and '@'
// if not then it goes into the loop
{
    System.out.println("Invalid Email");//Display error message
    //Continuous Prompt for valid mail
    System.out.println("Enter a Valid Email Address");
    //input valid mail
    email=in.next();
    //Break the loop
    //System.out.println("Sign Up Successful");
}

String username = new String ();//Declare username variable
System.out.println("\nEnter your username");
username = in.nextLine();
```

Test Data for Email address:

Test case ID	Test data	Condition 1	Condition 2
1	Keivagmail.com	True	False
2	Keiva@gmailcom	False	True

1.5.5 Condition coverage of user name

```
String username = new String (); //Declare username variable
System.out.println("\nEnter your username");
username = in.nextLine();

                Condition 1                Condition 2
while (username.length() <9 || username.length()>20)
{
    System.out.println("Username should be between 9 to 20 characters");
    System.out.println("Enter your username");
    username = in.nextLine();

}

                Condition 3
while (!(isUpper(username))) // is used to check if the characters in
the username are valid and are all letters
{
    System.out.println("First Character should be of UPPERCASE");//Display
error message
    // Continuous prompt for valid characters
    System.out.println("Enter a valid username");
    //input username
    username= in.nextLine();
}
```

Test Data for User Name:

Test case ID	Test data	Condition 1	Condition 2	Condition 3
1	Keiva	True	False	True
2	keiiiiiiiiivaaaaaaaaaaaa	False	True	False
3	Keivachorlotte	False	False	True

1.5.6 Condition coverage for password

```
System.out.println("Enter Password");
password = in.nextLine();

                Condition 1                Condition 2

while (password.length() <8 || password.length()>14)
{
    System.out.println("Password should be between 8 to 14 characters");
    System.out.println("Enter a valid password");
    password = in.nextLine();
}

                Condition 3

while (!isUppertotal(password))
{
    System.out.println("Password should contain at least 1 UPPERCASE");
    System.out.println("Enter a valid password");
    password = in.nextLine();
}

                Condition 4

while (!isspecial(password))
{
    System.out.println("Password should contain at least 1 special
character('#','_', '&')");
    System.out.println("Enter a valid password");
    password = in.nextLine();
}
```

Test case ID	Test data	Condition 1	Condition 2	Condition 3	Condition 4
1	Keivaa&	True	False	True	True
2	Keiiiivvaaaaaaa	False	True	True	False
3	keivaaaaa&	False	False	False	True
4	keivaaaaa	False	False	False	False

2.0 Labelling of code

Sign up

```
package nails_and_makeup;

3.0 Sample screenshots

Valid first name

The screenshot shows the Eclipse IDE interface. The Package Explorer on the left lists several projects, including 'AssignmentSV', 'Labsheet1OOP', 'Labsheet2aOOP', 'Labsheet2bOOP', and 'Labsheet3aOOP'. The Console window on the right displays the output of a Java application. The application starts with a 'Welcome to Nails & MakeUp!' message, followed by a 'Menu' and a prompt to 'Please choose from the following options:'. The user selects 'Option 2: Sign Up'. The application then prompts the user to 'Enter your choice', where the user enters '2'. Next, it prompts 'Enter your Firstname', where the user enters 'Kelva'. Finally, it prompts 'Enter your Lastname'.

Invalid first name

The screenshot shows the Eclipse IDE interface, similar to the previous one. The Package Explorer on the left lists the same projects. The Console window on the right displays the output of the Java application. The application starts with a 'Welcome to Nails & MakeUp!' message, followed by a 'Menu' and a prompt to 'Please choose from the following options:'. The user selects 'Option 2: Sign Up'. The application then prompts the user to 'Enter your choice', where the user enters '2'. Next, it prompts 'Enter your Firstname', where the user enters 'Kelva'. The application then displays an error message: 'Invalid Characters! Use a-z or A-Z for firstname'. The user then enters 'K' for the first name. The application then displays another error message: 'Firstname should be between 3-30 Characters'. Finally, it prompts 'Enter your Firstname' again.
